SITUATION SUMMARY

Magnitude 6.0 Earthquake, American Canyon, Napa County

SITUATION UPDATE:

On Sunday, August 24, 2014, at 0320 Hours PST, a magnitude 6.0 earthquake struck five miles northwest of American Canyon, CA. The earthquake nucleated at a depth of 10.8km. The shaking intensity in American Canyon and Napa from the “South Napa Earthquake” was a “VII” on the Modified Mercalli Scale, suggesting very strong shaking occurred in the Napa County area. Ground shaking was felt as far south as Salinas, east to Sacramento, and north to Ukiah. USGS estimates that aftershocks should be expected for the next week. The Cal OES Earthquake and Tsunami Duty Officer is in contact with the United States Geological Survey and California Geological Survey and will provide updates.

Aftershocks:

As of August 31, 2014 there have been 117 aftershocks. Napa felt a 3.2 jolt at 0300 this morning. In the last 10 days, there have now been five earthquakes magnitude 3.0 or greater centered nearby.

Area Weather Forecast

Quiet weather is expected across the San Francisco and Monterey Bay Region all work week.

Power and Utilities

Per CUEA:

- All communications functioning in normal range, AT&T has a COLT (cell on light truck) and mobile charging trailer on site in downtown Napa.

Water

- There is still a boil water order for any area with a loss of pressure.
- Water stations are located at staying open through the week:
 - Las Flores Center on Linda Vista Avenue and Pearl Street (1 block west of Main
- St. Helena Hospital (System No. 2800625) –
 - Result from St. Helena Hospital came back absent for total coliform and E. coli on 08/30/14.
 - The turbidity of sources was investigated and found to be minimal. The main turbidity problems are associated with their storage tanks. Contacts have been provided to the water system for tank cleaners.
- City of Napa (System No. 2810003): UPDATE: Reports of 8 water leaks that will be addressed by staff on Tuesday 9/2/14.
- It was strongly recommended that those parts of the distribution system where significant damage has occurred because of the earthquake be fully replaced in order to ensure a reliable water system going forward.
- Particularly important in at least two areas: (1) the reservoir "B" tank and (2) distribution system pipelines in locations where multiple breaks have occurred.

The infrastructure above was installed from the 1930s to the 1960s. The impact of the earthquake on the aging infrastructure will likely result in ongoing distribution failures that may compromise the safety and integrity of the water system in the future if left with interim fixes.

Schools Status/Closures

- Stonebridge Elementary in the Napa Valley School District will remain closed the rest of the week.

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

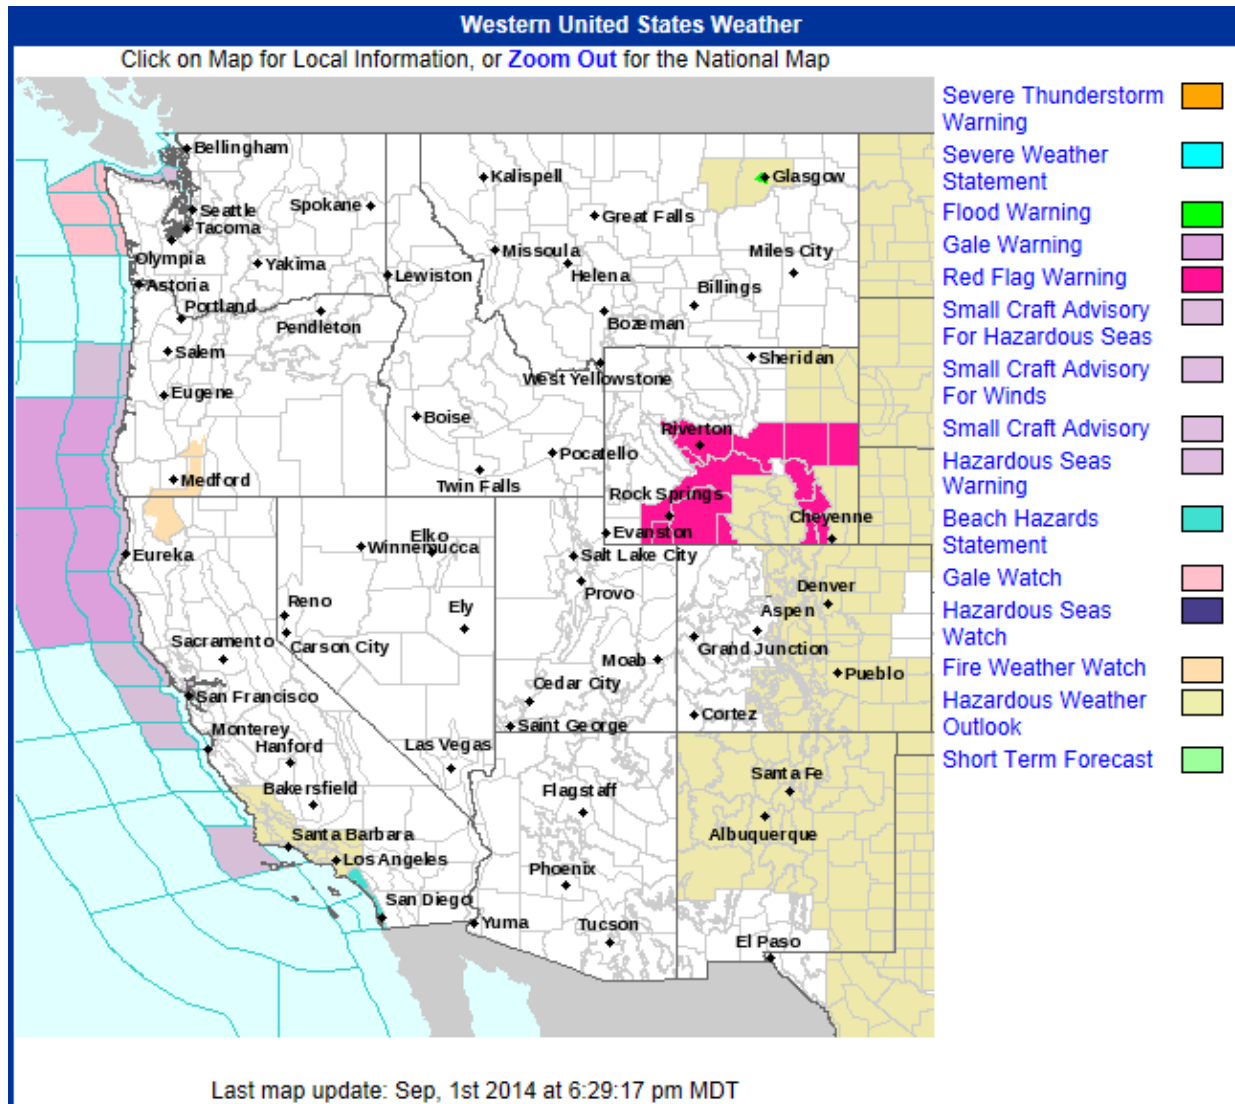

Weak Pacific high pressure builds in early this week, with winds shifting back to a more northwest to northeast light flow, bringing warmer, drier conditions to the region. Temperatures briefly will soar back to levels of 4-8 degrees above normal, reaching the low hundreds in the lower valleys. By mid week winds will gradually shift over to a cooler west to southwest/onshore flow across most of the region as high pressure breaks down. Lingered northwest to northeast winds are still expected for the northern portion of our area, mainly north of Highway 299. By the end of next week, models indicate that weak low pressure will be forming along the West Coast, centered over Northern California. This would bring a continued cooling trend with light winds. There could even be some very isolated showers or thunderstorms over the highest peaks of the Cascades this weekend as the region will be under a weak upper low center, but nothing more significant than that.

SOUTHERN CALIFORNIA

A ridge of high pressure over California will maintain slightly above normal temperatures across the region today, with 80s in the mountains and 90s in the valleys. Minimum humidity will continue to be in the single digits and teens above the marine layer today, which is currently around 1,500 feet deep. Winds will be light and variable today. A trough dropping down the West Coast will bring a slow cooling trend to the region Tuesday through this weekend. Temperatures will be between 5 and 10 degrees below normal starting Wednesday. This trough will also deepen the marine layer and by Wednesday it is expected to be between 2,000 and 3,000 feet deep. Minimum humidity will continue to be in the single digits and teens above the marine layer through this weekend. Southwest afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Tuesday through this weekend.
